At Scofield Timber Company, the appearance of your property is just as important as the value and health of the timber on it . . .

That's why we have expanded beyond timber harvesting services to become a single source for all your forestry and land management needs.

Scofield Land Services provides a comprehensive range of services to manage every phase of your property's preservation or development. Regardless of your needs, we will work with you to balance your timber investment, development specifications, and the overall appearance and vitality of the land.

*Removing underbrush and small hardwoods makes the property easily viewable and facilitates sales efforts.*

## Scofield Land Services include:

### Clearing

Scofield Land Services clears sites of all woody materials including trees, stumps, limbs and grindings. This is done under a permit from the proper authorities, usually obtained by the landowner or developer. The remaining materials can be mulched or burned on site where and when allowed. Such clearing prepares the land for final grading and subsequent development.

*Stumps and debris are pit burned where permitted or ground up where burn permits are not obtainable.*

*Removing stumps and debris in preparation for final grading.*

### Mulching

Scofield Land Services provides mulching equipment which grinds up all undesirable woody materials on a site. This includes stumps, logging debris and non-merchantable and weed trees. This enhances the aesthetic quality of the land after a timber harvest. Mulching is also necessary in developing green space, such as paths and parks, as well as other site-specific functions.

Mulching causes minimal impact to the land and is oftentimes used in conjunction with other general timber management activities, including the pre-commercial thinning of young trees and the herbiciding or controlled burning of a forest so healthy trees can thrive.

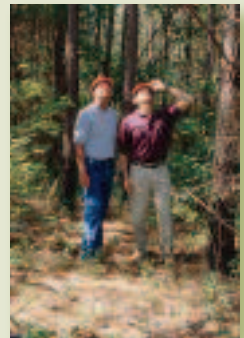

*Mulching the debris from harvesting operations changes an eyesore into a level and accessible site.*

### Timber Management

Scofield Land Services offers a complete range of timber management services to meet your individual specifications.

Such services include:

- Herbiciding
- Tree planting
- Site preparation
- Controlled burning
- Pre-commercial thinning of young trees
- Timber management plans
- Growth projections

### Aesthetic Management

Appearances are everything, and Scofield Land Services is your source to improve the visual quality of your tract. Site visits are available for interested landowners to view firsthand the wide variety of our capabilities.
